

Write-On 2.0

Technical Bulletin

Bulletin: #100128
Application: Write-On 2.0
Version: **V.2.0.57**
Released: January 28, 2010
Importance: Important

Subject: New Release

Introduction

A new version of Write-On 2.0 has been released. A description of the improvements and new features are outlined below. You can confirm your current version of Write-On by accessing the "About" window located under the main "Help" menu.

How to Upgrade

If you are a registered user of Version 2.0, you can upgrade your current version of Write-On using one of the 2 available methods:

1. By using the program's auto-upgrade feature. Within the program, access the "Check For Upgrade..." command located under the main "Help" menu.
2. By visiting our latest upgrade area at www.pikaso.com/downloads. Once downloaded, execute the latest setup file and simply install the new version over your older version. No case data will be lost.

A live Internet connection is required. You may be required to enter your serial number and activation code if the application is installed into a different folder or onto a new computer.

IMPORTANT: Installation of software onto your computer requires administrative privileges. Consult your IT specialist for more information.

Word index

The word and segment index behavior has been modified to include all single letter acronyms such as S.W.A.T. and N.A.V. and all expressions starting with a numerical such as phone numbers and zip codes. In previous releases, such acronyms were not reported in the segment index but were however reported in advanced search.

As a result of this change, the case database structure has been modified and we recommend that all your copies of Write-On be updated accordingly. When activating an existing case, the word and segment index will automatically be rebuilt to indicate the correct count.
